DETAILED ACTION

In the amendment filed on 05/26/10, the following have occurred: claims 4-6, 11-29, and 38 have been withdrawn from consideration and claims 1-3 and 7-10 remain pending.

Allowable Subject Matter

Claims 1-3 and 7-10 are allowed.

Examiner's Statement of Reason for Allowance

The following is an examiner's statement of reasons for allowance for all claims:

Re claims 1, 7 and 8. The prior art fails to disclose a computer-implemented method of receiving a check identifier entered by a user, the method comprising: requesting, via at least one processor, a user to review an original check identifier in MICR format, the original check identifier comprising a plurality of numeric fields separated by separator symbols, the plurality of numeric fields comprising a routing number field, an account number field and a check number field; instructing, via the at least one processor, the user to replace the separator symbols of the original check identifier in MICR format with non-numeric keyboard replacement symbols, thereby obtaining a substitute check identifier, the substitute check identifier comprising the plurality of numeric fields separated by the replacement symbols; requesting, via the at least one processor, the user to enter the substitute check identifier; and identifying, via at least one processor, the routing number field, the account number field and the check number field within the entered substitute check identifier. The closest prior art is also the best U.S art: Carney et al (US PAT: 5,890,141). Carney et al describes various systems and methods for detecting and preventing check fraud by providing prepared

checks with unique check digits and systems and methods for evaluating these check digits for detection of possible fraud or counterfeiting. Carney et al further discloses, "the reader/sorter 250 further includes an image camera 260 for capturing the payee name and issue date from the face of the check when presented. These captured alpha and numeric characters are then converted to numeric values and combined with the information read from the MICR line and the check digit routine is recalculated (Col. 6, lines 14-50). Although, Carney is capturing ALPHA and numeric characters on the prepared checks and converting these captured data to numeric values and further operating on the numeric conversion of the alphanumeric characters through a check sum algorithm to derive a check sum for security purposes to facilitate detection of possible incidences of fraud and/or counterfeiting, Carney is not actually replacing separator symbols in a MICR line demarcating between an account number field, a routing number field, and/or a check number field. Carney thus fails to teach replacing separator symbols of an original check identifier in MICR format with replacement symbols where the separator symbols separate a plurality of numeric fields, the plurality of numeric fields comprising a routing number field, an account number field and a check number field.

Furthermore, DRAFT CHECK TRUNCATION ACT (EFT Report, v 24 , n 12 , p NA, June 13 , 2001), cited prior art, discloses the truncation of paper checks in the electronic form and the creation of substitute checks. However, DRAFT CHECK TRUNCATION ACT fails to teach replacing separator symbols of an original check identifier in MICR format with replacement symbols where the separator symbols

separate a plurality of numeric fields, the plurality of numeric fields comprising a routing number field, an account number field and a check number field.

Updated searches revealed no references that disclosed the claimed inventions nor were any secondary references identified which could be reasonably combined with Carney et al. The drawings submitted on 01/08/2002 are acceptable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
